

Remarks

Claims 1-8 are pending. Reconsideration and allowance in view of the above amendments and following remarks are respectfully requested.

The disclosure is objected to because the cross-reference to related applications (page 2, line 14) does not include an application serial number. The specification has been amended to include the application serial number.

Claims 2, 4, and 7 are rejected under 35 U.S.C. 112, first paragraph, as allegedly containing subject matter that was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Applicant submits that the subject matter set forth in claims 2, 4, and 7 is fully disclosed in the specification in such a way as to enable one skilled in the art to make and/or use the invention (see, e.g., page 11, lines 3-6).

Claims 1, 3, and 5 are rejected under 35 U.S.C. 102(a) over Seacord et al., "A Survey of Black-Box Modernization Approaches for Information Systems," hereafter "Seacord." Claims 2 and 4 are rejected under 35 U.S.C. 103(a) over Seacord in view of Sintas, "Does Java Pass by Reference or Pass by Value," hereafter

Serial No.: 09/781,615

6

"Sintas." Claims 6 and 8 are rejected under 35 U.S.C. 103(a) over Seacord in view of "Dictionary of Computing," hereafter "Computing." Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Seacord in view of Computing and Sintas. These rejections are defective because the cited references, taken alone or in any combination, fail to teach or suggest each and every feature set forth in the claims as required by 35 U.S.C. 102(a) and 103(a).

Regarding independent claim 1, Seacord fails to teach or suggest, *inter alia*, an "interface which allows for the distributed processing of the legacy application by a plurality of different processors over the network, wherein the EJB interface allows for the distributed processing and the legacy application retains its conventional processing." In the rejection, the Examiner references the term "distributed" in the bulleted items in section 3.3.3 of Seacord. However, in section 3.3.3 of Seacord, the term "distributed" is directed to Microsoft's "Distributed interNet Architecture," not to EJB component wrapping. Nowhere in Seacord is there disclosure related to the use of EJB component wrapping in a distributed processing environment as set forth in claim 1. Accordingly, Applicant submits that claim 1 is allowable. Independent claims 3 and 6 are allowable for similar reasons.

Serial No.: 09/781,615

7

With further regard to claim 3, Seacord fails to teach or suggest "providing an index to the components and the interface," wherein the components are located in different servers. With regard to claim 5 (and similarly claim 8), Seacord fails to teach or suggest "using a shared library accessing a component bean and a library of export symbols." The "single access point to all other points" disclosed by Seacord and cited by the Examiner does not provide an index to the components located in different servers (claim 3), nor a shared library accessing a component bean and a library of export symbols (claims 5 and 8).

Accordingly, Applicants submit that claims 1-8 are allowable.

If the Examiner believes that any further discussion of the invention would be helpful, perhaps in the form of an Examiner's Amendment, Applicants' representative is available at (518) 449-0044, and earnestly solicits such discussion.

Respectfully submitted,

 By: John A. Merecki
